

Application for Campus Engineering Trainee

Dear Hiring Team at American Express,

I am pleased to express my interest in the Engineering position at American Express. I am currently a Computer Science student, specialising in Data Science at VIT Chennai. I have a great interest in software engineering, artificial intelligence and machine learning to build robust technology solutions.

I have hands-on experience with different technologies like Python, Java, C++, and cloud platforms. Here are some highlights of my work: - Built an in-memory key-value database in Python inspired by Redis - Built an API rate-limiter with Redis, Flask, and FastAPI - Built an AI-based expense receipt scanning and analytics platform with OCR, OpenCV, FastAPI, React, and machine learning.

These projects have given me a strong understanding of data structures, algorithms, API development, system design, machine learning pipelines, and performance optimisation. I like to understand how systems work behind the scenes and use that understanding to make efficient and maintainable solutions.

The role at American Express draws me in because of its focus on scalable applications, distributed systems, Big Data, AI/ML, and real-world products that make an impact on customers. I am excited to work on large-scale production systems, learn from experienced engineers and apply my skills to a team.

I have a great desire to learn, think analytically and have a problem-solving attitude when faced with challenges. I like to work across different areas of tech and explore new tools to solve technical problems in the best way.

I look forward to the opportunity to join American Express and contribute to meaningful technology and continue to grow as an engineer in this fast-paced environment.

Thank you for your patience in reviewing my application.

Best,

Keshav Sharma
