McKinsey & Company

Dear Hiring Manager,

I am writing to apply for the Junior Capabilities and Insights Analytics Analyst position at QuantumBlack, AI by McKinsey in Chennai. As a Computer Science student specializing in Data Science, I have developed hands-on experience building end-to-end analytics and machine learning solutions across financial, retail, and market data. I am particularly interested in this role because it combines analytical problem-solving, technology, and business impact.

My projects have given me practical experience working with large datasets and translating data into actionable insights. In my Financial Transaction Anomaly Detection & Audit Dashboard project, I engineered an analytics pipeline processing 50K+ financial transactions, combining statistical analysis, anomaly detection, risk scoring, and a SQLite star-schema data warehouse. I then built a Power BI dashboard with 20+ DAX measures to analyze vendor risk, transaction trends, and anomaly KPIs, identifying 357 high- and critical-risk transactions in under seven seconds.

I have also worked extensively with predictive analytics and customer-focused problems. My Customer Lifetime Value project involved analyzing more than 1M retail transactions, developing BG/NBD and Gamma-Gamma models for customer value prediction, and building Power BI dashboards and an ROI simulator to connect customer behavior with retention and revenue opportunities. In a separate real-time market analytics project, I processed 2M+ NSE records and developed anomaly detection models using Isolation Forest and LSTM Autoencoders, achieving 88% precision and 85% recall while reducing detection latency by 35%.

These projects have strengthened my skills in Python, SQL, data processing, statistical analysis, machine learning, data warehousing, and Power BI. They have also taught me to approach technical problems from the perspective of the decision or business outcome they support. This aligns closely with QuantumBlack's focus on using data, analytics, AI, and interdisciplinary collaboration to solve complex business problems and improve organizational performance.

I would welcome the opportunity to contribute my analytical and technical skills to QuantumBlack while learning from teams working across data science, data engineering, business intelligence, and industry domains. Thank you for considering my application.

Sincerely,
Keshav Sharma
