EDUCATION

Vellore Institute of Technology — **Chennai, Tamil Nadu**

Bachelor of Technology in Computer Science (Data Science Specialisation) — *Graduation: May 2027*

SKILL SUMMARY

Languages: Python, Java, C/C++, JavaScript, R
Analytical & Product Skills: Market & Trend Research, Requirements Analysis, Competitive Benchmarking, Data-Driven Decision Making, KPI Tracking, Stakeholder Communication, Feature Documentation
Domain Exposure: Equity Market Data Analysis, Financial Time-Series Analysis, Trading Pattern Detection, Fintech Product Development
Data & Analytics: SQL, Pandas, NumPy, Power BI, Data Visualisation, Excel
Technical Foundation: Machine Learning, REST APIs, Full-Stack Development (FastAPI, React), Git/GitHub

EXPERIENCE

VOIS – Vodafone Idea Foundation* | LINK** — ***Aug – Sep, 2025

- Analyzed 2 real-world datasets (8,500+ records) using AI-assisted, natural-language querying to extract 15 structured business insights on user engagement and content trends.
- Iteratively validated AI-generated outputs for accuracy and relevance, ensuring findings were reliable enough to act on.
- Presented findings to 3 mentors and translated the analysis into 4 actionable business recommendations, delivered as an AICTE/VOIS/Vodafone Idea Foundation-certified capstone.

PROJECTS

***Real-Time Stock Market Anomaly Detector* | LINK**

- Analyzed real-time NSE (National Stock Exchange) price and volume data to identify abnormal trading patterns, combining statistical (Isolation Forest) and deep learning (LSTM Autoencoder) techniques for hands-on exposure to live equity market behavior.
- Incorporated financial news sentiment (FinBERT) as a contextual signal, turning unstructured market information into structured, actionable alerts.
- Evaluated detection precision against false-positive rate, the same sensitivity/reliability trade-off that matters in any production trading-alert or risk feature.

***AI-Powered Expense Receipt Scanner & Analytics Platform* | LINK**

- Designed and built a full-stack, user-facing financial analytics product (FastAPI + React) spanning the complete user journey, receipt capture, automated parsing, budget tracking, and spend analytics.
- Defined and implemented core product features (secure authentication, CRUD workflows, data export), translating user needs into working functionality end to end.
- Deployed and maintained the live application on Render/Vercel, iterating on usability based on real user testing and feedback.

***Customer Lifetime Value Engine* | LINK**

- Converted 1M+ raw transaction records into customer-level lifetime value forecasts using BG/NBD and Gamma-Gamma probabilistic models, turning raw data into a business-usable metric.
- Segmented customers into value-based cohorts (high/medium/low CLV) to support prioritization decisions around retention efforts and marketing spend.
- Built Power BI dashboards to communicate cohort trends and revenue potential clearly to non-technical stakeholders, closing the loop from raw data to decision-ready insight.

***Docwise* | LINK**

- Engineered Docwise, an AI-powered PDF Question Answering system using Google Gemini and Retrieval-Augmented Generation (RAG), achieving 95%+ query accuracy and reducing manual document search time by 40% through intelligent chunking, TF-IDF retrieval, and real-time indexing for 200+ page PDFs.
- Improved answer reliability and user experience through prompt engineering, retrieval optimization, and hallucination-aware validation, while implementing chat history and session management in Streamlit, contributing to a 35% improvement in user retention.

Certifications

- Oracle Cloud Infrastructure 2025 Certified Generative AI Professional | LINK — 2026
- Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate | LINK — 2026
