Deloitte.

Dear Hiring Manager,

I am writing to apply for the Assistant – Data and Analytics position within Deloitte's Audit & Assurance practice. As a Computer Science student specializing in Data Science, I have developed hands-on experience in data analysis, machine learning, SQL, Python, and Power BI, with a particular interest in using data to identify patterns, anomalies, and actionable business insights.

During my experience with VOIS – Vodafone Idea Foundation, I analyzed two real-world business datasets containing more than 8,500 records, applying data preprocessing and AI-assisted analytics to identify trends and generate 15 actionable business insights. I also validated analytical findings for accuracy and consistency and developed a standardized workflow for preprocessing, insight generation, and validation. This experience strengthened my ability to work carefully with business data and translate analytical findings into meaningful recommendations.

My project experience further aligns with Deloitte's Data & Analytics requirements. I developed a Financial Transaction Anomaly Detection & Audit Dashboard that processed 50K+ financial transactions using Python and SQL, combining statistical outlier detection, rule-based checks, and Isolation Forest to identify anomalous transactions. I also designed a relational data warehouse and built a five-page Power BI dashboard with DAX measures to analyze transaction trends, vendor risk, outliers, and anomaly-related KPIs. Through my Intelligent Expense Management & Receipt Analytics Platform, I worked with unstructured receipt data, using OCR and NLP to convert more than 12,000 receipts into structured financial information for analysis and expense tracking.

These experiences have developed my ability to approach problems analytically, work with structured and unstructured data, build reliable data workflows, and communicate complex findings through visualizations and dashboards. I am particularly interested in Deloitte's use of analytics and technology to enhance audit quality, identify patterns and anomalies, and provide meaningful insights to audit teams and clients.

I would welcome the opportunity to contribute my technical and analytical skills to Deloitte's Audit & Assurance Data & Analytics team while continuing to develop my understanding of analytics-driven audit and assurance. Thank you for considering my application.

Sincerely,
Keshav Sharma
