EDUCATION

Vellore Institute of Technology — **Chennai, Tamil Nadu**

Bachelor of Technology in Computer Science (Data Science Specialisation) — *Graduation: May 2027*

SKILL SUMMARY

Analytics & Data: Python, SQL, Pandas, NumPy, Data Analysis, Exploratory Data Analysis, Statistical Analysis, Data Cleaning, Feature Engineering, Data Visualization
Data Visualization: Power BI, Excel, Matplotlib, Seaborn, DAX
Machine Learning: Scikit-learn, XGBoost, Classification, Forecasting, Anomaly Detection, Model Evaluation, Explainable AI
Databases & Data Processing: MySQL, SQLite, Relational Databases, ETL, Structured & Unstructured Data Processing
Programming & Tools: FastAPI, Flask, REST APIs, Git, GitHub, Docker, Jupyter
Specialized: OCR, NLP, SHAP, MLflow, Qiskit

EXPERIENCE

VOIS – Vodafone Idea Foundation* |LINK** — ***Aug – Sep, 2025

- Analyzed 2 real-world business datasets containing 8,500+ records, applying data preprocessing and AI-assisted analytics to identify trends and generate 15 actionable business insights for data-driven decision-making.
- Validated analytical findings for accuracy and consistency, reviewing outputs to ensure reliable and meaningful insights for business recommendations.
- Established a standardized analytics workflow covering data preprocessing, insight generation, and validation, enabling consistent conversion of raw business data into actionable recommendations.

PROJECTS

***Financial Transaction Anomaly Detection & Audit Dashboard* | LINK**

- Engineered a financial transaction analytics pipeline processing 50K+ PaySim transactions, combining duplicate detection, IQR/z-score outlier analysis, vendor-velocity checks, HHI concentration analysis, and Isolation Forest to identify anomalous transactions.
- Designed a star-schema data warehouse in SQLite with fact and dimension tables and generated a composite 0–100 risk score, identifying 357 high/critical-risk transactions with end-to-end detection completed in under 7 seconds.
- Built a 5-page Power BI audit dashboard with 20+ DAX measures to analyze vendor risk, transaction trends, outliers, and anomaly-rate KPIs, supported by automated tests for pipeline reliability.

***Intelligent Expense Management & Receipt Analytics Platform*| LINK**

- Built an automated expense analytics workflow that extracted structured information from 12,000+ receipts with ~96% OCR accuracy, reducing manual bookkeeping effort by 80%.
- Designed a receipt-to-insight pipeline covering image capture, OCR-based extraction, NLP expense categorization, and transaction analytics to identify spending patterns and support budget tracking.
- Developed interactive dashboards, budgeting, and data-export capabilities with secure authentication, achieving average API response times below 180 ms.

***Customer Lifetime Value Prediction & Segmentation* |LINK**

- Analyzed 1M+ retail transactions to identify purchasing patterns, segment customers by value, and estimate churn risk and future revenue potential.
- Developed BG/NBD and Gamma-Gamma models achieving 0.87 R^2 for 12-month customer value prediction and translated transaction-level behavior into actionable customer segments.
- Built interactive Power BI dashboards and an ROI simulator to visualize customer segments, revenue forecasts, and retention opportunities.

***Real-Time Stock Market Anomaly Detector* |LINK**

- Built a real-time analytics pipeline processing 2M+ NSE market records to identify unusual market behaviour by combining price signals with financial-news sentiment.
- Developed anomaly-detection models using Isolation Forest and LSTM Autoencoder, achieving 88% precision and 85% recall on validation data.
- Reduced detection latency by 35%, enabling near real-time identification of unusual events for faster monitoring and analysis.

Certifications

- Oracle Cloud Infrastructure 2025 Certified Generative AI Professional |**LINK** 2026
- Deloitte Australia Data Analytics Job Simulation |**LINK** 2025
- AWS APAC Solutions Architecture virtual experience program | **LINK** 2025
