EDUCATION

Vellore Institute of Technology — **Chennai, Tamil Nadu**

Bachelor of Technology in Computer Science (Data Science Specialisation) — *Graduation: May 2027*

SKILL SUMMARY

Analytics & Data: Python, SQL, Pandas, NumPy, Power BI, Matplotlib, Data Analysis, Exploratory Data Analysis, Data Visualization, Statistical Analysis
Machine Learning & AI: Scikit-learn, TensorFlow, PyTorch, LLM Applications, Generative AI, Prompt Engineering, Model Evaluation, Forecasting, Anomaly Detection
Product & Problem Solving: Product Analytics, Customer Segmentation, KPI Analysis, Root-Cause Analysis, A/B Testing, User Journey Analysis, Data-Driven Decision Making
Databases & Engineering: MySQL, SQLite, Redis, FastAPI, Flask, REST APIs, Git, GitHub, Docker
Product Tools: Excel, Google Sheets, Jira, Figma, Agile/Scrum

EXPERIENCE

VOIS – Vodafone Idea Foundation* |LINK** — ***Aug – Sep, 2025

- Analyzed 2 real-world business datasets (8,500+ records) using AI-assisted analytics to identify trends, generate 15 actionable business insights, and support data-driven decision-making.
- Validated analytical findings for accuracy and consistency, ensuring reliable recommendations for business planning and operational improvements.
- Designed a standardized analytics workflow for data preprocessing, insight generation, and validation, enabling efficient conversion of raw data into meaningful business recommendations.

PROJECTS

***Customer Lifetime Value Engine* |LINK**

- Analysed 1M+ retail transactions to identify customer purchasing patterns, segment users by value and estimate churn risk and future revenue potential.
- Developed BG/NBD and Gamma-Gamma models achieving 0.87 R^2, translating transaction-level behaviour into 12-month customer value predictions.
- Built interactive Power BI dashboards and an ROI simulator to support customer segmentation, revenue forecasting and data-driven retention decisions..

***AI Expense Management & Analytics Platform* | LINK**

- Built an automated expense-management workflow that extracted structured information from 12,000+ receipts with ~96% OCR accuracy, reducing manual bookkeeping effort by 80%.
- Designed the user workflow from receipt capture → data extraction → categorization → analytics, using NLP-based processing to automatically classify expenses and surface spending patterns.
- Developed interactive dashboards, budgeting and export capabilities with secure authentication, reducing average API response time to <180 ms and enabling faster expense tracking.

***Real-Time Stock Market Anomaly Detector* |LINK**

- Built a real-time analytics pipeline processing 2M+ NSE market records to identify unusual market behaviour by combining price signals with financial-news sentiment.
- Developed anomaly-detection models using Isolation Forest and LSTM Autoencoder, achieving 88% precision and 85% recall on validation data.
- Reduced detection latency by 35%, enabling near real-time identification of unusual events for faster monitoring and analysis.

***API Rate Limiter Library* | LINK**

- Built a reusable API rate-limiting library implementing five throttling strategies to control traffic, prevent service overload and maintain reliable API performance across applications.
- Designed Redis-backed and in-memory storage with thread-safe request handling and pluggable components, enabling flexible deployment across different application environments.
- Validated reliability through 30+ automated tests covering concurrency, edge cases and algorithm correctness, and packaged the library on PyPI for reusable integration.

Certifications

- Oracle Cloud Infrastructure 2025 Certified Generative AI Professional |**LINK** 2026
- Deloitte Australia Data Analytics Job Simulation |**LINK** 2025
- AWS APAC Solutions Architecture virtual experience program | **LINK** 2025
