# Keshav Sharma

India | 8168289407 | keshavsharma71982@gmail.com | LinkedIn Link | GitHub Link | Portfolio

## EDUCATION

**Vellore Institute of Technology** — **Chennai, Tamil Nadu**

*Bachelor of Technology in Computer Science (Data Science Specialisation)* — *Graduation: May 2027*

## SKILL SUMMARY

**Languages:** Python, SQL, R, JavaScript, Java, Cpp
**Data Analysis & Modeling:** Pandas, NumPy, Scikit-learn, Statistical & Predictive Modeling (BG/NBD, Gamma-Gamma, Isolation Forest, LSTM)
**Generative AI & LLMs:** Prompt Engineering, LLM Integration (Google Gemini API), Julius AI, NLP
**Data Visualization & Reporting:** Power BI, Streamlit, Excel, Google Sheets
**Databases:** MySQL, SQLite, Redis
**Tools:** Git, GitHub, Jupyter Notebook, VS Code

## EXPERIENCE

***VOIS – Vodafone Idea Foundation*** **|LINK** — ***Aug – Sep, 2025***

- Analyzed 8,500+ real-world records using Julius AI and LLM-assisted workflows, extracting 15 actionable business insights through data exploration and prompt engineering.
- Developed structured analytical workflows, validated AI-generated outputs, and translated findings into 4 business recommendations presented to 3 mentors.
- Completed an industry-sponsored capstone project, earning certification from VOIS, Vodafone Idea Foundation, and AICTE.

## PROJECTS

***Customer Lifetime Value Engine*** **|LINK**

- Extracted, validated, and engineered features from 1M+ retail transaction records, applying statistical analysis and probabilistic modeling (BG/NBD, Gamma-Gamma) in Python to forecast 12-month Customer Lifetime Value for 4,000+ customers.
- Developed churn-risk scoring and value-based customer segmentation to identify high-risk, high-value accounts, converting model outputs into actionable, revenue-focused retention strategies.
- Delivered results through a Power BI dashboard and Streamlit-based analytics platform with a campaign ROI simulator, enabling data-driven decision-making for targeted customer retention.

***Real-Time Stock Anomaly Detector*** **|LINK**

- Conducted quantitative analysis on 2 years of NSE stock data, engineering 9 financial features (RSI, Bollinger Bands, volume ratio) and deploying dual predictive models (Isolation Forest, LSTM Autoencoder) to detect anomalous trading patterns across 448 sessions.
- Integrated FinBERT sentiment analysis on live news headlines to correlate qualitative market sentiment with quantitative price anomalies, validating high-confidence events against real NSE announcements via an interactive dashboard.

***AI-Powered Expense Receipt Scanner & Analytics Platform*** **|LINK**

- Owned the product end-to-end — designed, built, and automated a receipt-processing pipeline using EasyOCR, OpenCV, and NLP-based parsing, extracting merchant, amount, date, and category from diverse formats with confidence scoring, cutting manual entry time by 40%.
- Independently architected and deployed the full stack (FastAPI, React, SQLAlchemy, SQLite, JWT/OAuth authentication), shipping expense analytics, budget tracking, and a live production dashboard hosted on Render and Vercel.

***Docwise*** **|LINK**

- Owned the product end-to-end — engineered an AI-powered PDF Q&A system using Google Gemini, achieving 95%+ query accuracy and cutting manual document search time by 40%.
- Independently designed the scalability layer — TF-IDF vectorization, chunking, and real-time processing for 200+ page PDFs — plus chat history and session management, driving a 35% lift in user retention.

## Certifications

- Oracle Cloud Infrastructure 2025 Certified Generative AI Professional **|LINK** 2026
- Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate **|LINK** 2026
- Deloitte Australia Data Analytics Job Simulation **|LINK** 2025
