EDUCATION

Vellore Institute of Technology — **Chennai, Tamil Nadu**

Bachelor of Technology in Computer Science (Data Science Specialisation) — *Graduation: May 2027*

SKILL SUMMARY

Programming Languages: Python, Java, C/C++, JavaScript, SQL, R
Software & Application Development: Data Structures & Algorithms, Object-Oriented Programming, REST APIs, Backend Development, FastAPI, Flask, React.js, Node.js, Multithreading & Concurrency, Unit Testing, Test-Driven Development
Databases & Data Engineering: MySQL, SQLite, Redis, SQL Programming, Database Design, Data Processing & Transformation, Data Pipelines, Data Cleaning & Validation
Data Science & AI/ML: Machine Learning, Deep Learning, Scikit-learn, PyTorch, Pandas, NumPy, Statistical Analysis, Feature Engineering, Model Evaluation, Time-Series Analysis, Anomaly Detection
Generative AI & NLP: Large Language Models, Retrieval-Augmented Generation (RAG), Prompt Engineering, Google Gemini API, Natural Language Processing
Analytics & Visualization: Power BI, DAX, Tableau, Matplotlib, Exploratory Data Analysis
Tools & Platforms: Git, GitHub, Docker, Jupyter Notebook

EXPERIENCE

VOIS for Tech University Engagement Program* |LINK** — ***Aug – Sep, 2025

- Analysed 2 real-world business datasets containing 8,500+ records, applying data preprocessing and AI-assisted analytics to identify trends and generate 15 actionable business insights for data-driven decision-making.
- Validated analytical findings for accuracy and consistency, reviewing outputs to ensure reliable and meaningful insights for business recommendations.
- Established a standardised analytics workflow covering data preprocessing, insight generation, and validation, enabling consistent conversion of raw business data into actionable recommendations.

PROJECTS

***AI-Powered Expense Receipt Scanner & Analytics Platform* |LINK**

- Developed a full-stack receipt-processing platform using EasyOCR and OpenCV to extract expense information from receipt images, with a FastAPI backend and React frontend.
- Implemented SQLAlchemy-based data persistence with SQLite, enabling structured storage and management of extracted expense records.
- Integrated JWT-based authentication and Google OAuth to support secure user access, and deployed the application using Render and Vercel, reducing processing time by 40%.

***Docwise* |LINK**

- Built an AI-powered PDF question-answering application using Retrieval-Augmented Generation (RAG), enabling users to ask questions and retrieve relevant information from document content.
- Developed a document retrieval and question-answering workflow designed to handle PDFs exceeding 200 pages, helping users locate relevant context without manually searching through lengthy documents.
- Integrated the Google Gemini API to generate context-aware responses from retrieved document information, achieving 95%+ query accuracy in the reported evaluation.

***Energy Anomaly Detector*| LINK**

- Developed an electricity-consumption anomaly detection pipeline using hourly resampling, temporal features, rolling baselines, and Isolation Forest.
- Automated anomaly logging, visual reporting, and email alerts with rate limiting.
- Evaluated against a 95th-percentile threshold, identifying 9 anomalies across 6,918 test hours.

***Financial Transaction Anomaly Detection & Audit Dashboard* | LINK**

- Built a data-analysis pipeline processing 50K+ PaySim transactions using duplicate detection, statistical outlier analysis, vendor-velocity checks, concentration analysis, and Isolation Forest.
- Designed a star-schema SQLite warehouse and composite 0–100 risk score, identifying 357 high- or critical-risk transactions.
- Created a five-page Power BI dashboard with 20+ DAX measures and automated pipeline tests.

Certifications

- Oracle Cloud Infrastructure 2025 Certified Generative AI Professional |**LINK** 2026
- Deloitte Australia Data Analytics Job Simulation |**LINK** 2025
- AWS APAC Solutions Architecture virtual experience program | **LINK** 2025
